# Homology Classes of Generalised Triangulations Made up of a Small Number of Simplexes 

V. Nardozza*

September $2014^{\dagger}$

#### Abstract

By means of a computer, all the possible homogeneous compact generalised triangulations made up of a small number of 3 -simplexes (from 1 to 3 ) have been classified in homology classes. The analysis shows that, with a small number of simplexes, it is already possible to build quite a large number of separate topological spaces.

Key Words: topology, generalised triangulation, homology.

## 1 Introduction

Given a number $T$ of 3 -simplexes, having n (with $n=4 \cdot T$ ) faces, it is possible to build several compact topological spaces by identifying the $n$ faces in couples. There are:

$$
\begin{equation*}
(n-1) \cdot(n-3) \cdot \ldots \cdot 1 \tag{1}
\end{equation*}
$$

different combinations possible for identifying faces. For each of the above combination there are $\frac{n}{2}$ couple of identified faces and, for each couple, we have 6 different orientations for the identification.

In total, all the possible compact generalised triangulations that is possible to build up with a number T of 3 -simplexes are:

$$
\begin{equation*}
(n-1) \cdot(n-3) \cdot \ldots \cdot 1 \cdot 6^{\frac{n}{2}} \tag{2}
\end{equation*}
$$

where the above equation takes already into account the most obvious symmetries.

For example, with 1 simplex is possible to build 108 different compact generalised triangulations, with 2 simplexes is possible to build 136080 compact generalised triangulations and so on. Note that some of the combinations lead to non feasible triangulations meaning that, given the instruction for identifying faces, it is simply not possible to build a space that makes sense.

By means of a computer we have evaluated the homology groups of all the possible generalised triangulations made up of T simplexes (with T going from 1 to 3 ) and we have classified them is classes of triangulations having the same homology groups.

[^0]The homology groups have been evaluated from the boundary maps $\partial_{i}$, expressed as matrices $D_{i}$ of integers, in the usual way:

- the rank of the homology group $H_{i}$ has been evaluated as:

$$
\begin{equation*}
\# \operatorname{Ker}\left(\partial_{i}\right)-\# \operatorname{Im}\left(\partial_{i+1}\right)=\# C_{i}-\operatorname{Rank}\left(D_{i}\right)-\operatorname{Rank}\left(D_{i+1}\right) \tag{3}
\end{equation*}
$$

where \# means space dimension, $C_{i}$ is the i-chain of the generalised triangulation under study and, in our representation, $\# C_{i}$ is the number of columns of the matrix $D_{i}$.

- the torsion part of the group $H_{i}$ has been read across from the matrix $D_{i+1}$ expressed in Smith Normal Form.

The results are reported below.

| Type of Triang. | Num. of Triang. | Note |
| :--- | :---: | :--- |
| Non feasible triangulations | 69 |  |
| Path connected triangulations | 39 | in 3 homology classes |
| Non path connected triangulations | N/A |  |
| Total | 108 |  |

Table 1: Triangulations made of 1 simplex

| Type of Triang. | Num. of Triang. | Note |
| :--- | :---: | :--- |
| Non feasible triangulations | 98991 |  |
| Path connected triangulations | 35568 | in 13 homology classes |
| Non path connected triangulations | 1521 | in 6 homology classes |
| Total | 136080 |  |

Table 2: Triangulations made of 2 simplexes

| Type of Triang. | Num. of Triang. | Note |
| :--- | :---: | :--- |
| Non feasible triangulations | 366924249 |  |
| Path connected triangulations | 113844096 | in 43 homology classes |
| Non path connected triangulations | 4220775 | in 47 homology classes |
| Total | 484989120 |  |

## 2 Spaces Made of 1 Simplex - Sum up Table

The following table sums up the homology classes of all path connected compact homogeneous generalised triangulations made up of only 1 simplex.

| $n$ | $H_{0}$ | $H_{1}$ | $H_{2}$ | $H_{3}$ | $\chi$ | Num. of Triang. |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 1 | $\mathbb{Z}$ | 0 | 0 | $\mathbb{Z}$ | 0 | 27 |
| 2 | $\mathbb{Z}$ | $\mathbb{Z}_{4}$ | 0 | $\mathbb{Z}$ | 0 | 6 |
| 3 | $\mathbb{Z}$ | $\mathbb{Z}_{5}$ | 0 | $\mathbb{Z}$ | 0 | 6 |

Table 4: Homology classes (spaces made of 1 simplex)

## 3 Spaces Made of 2 Simplexes - Sum up Table

The following table sums up the homology classes of of all path connected compact homogeneous generalised triangulations made up of 2 simplexes.

| $n$ | $H_{0}$ | $H_{1}$ | $H_{2}$ | $H_{3}$ | $\chi$ | Num. of Triang. |
| :--- | :--- | :--- | :--- | :--- | :---: | :--- |
| 1 | $\mathbb{Z}$ | 0 | $\mathbb{Z}$ | $\mathbb{Z}^{2}$ | 0 | 12096 |
| 2 | $\mathbb{Z}$ | 0 | 0 | $\mathbb{Z}^{2}$ | -1 | 10080 |
| 3 | $\mathbb{Z}$ | 0 | 0 | $\mathbb{Z}$ | 0 | 5880 |
| 4 | $\mathbb{Z}$ | $\mathbb{Z}_{3}$ | 0 | $\mathbb{Z}$ | 0 | 2496 |
| 5 | $\mathbb{Z}$ | 0 | $\mathbb{Z}$ | $\mathbb{Z}$ | 1 | 1296 |
| 6 | $\mathbb{Z}$ | $\mathbb{Z}_{2}$ | 0 | $\mathbb{Z}$ | 0 | 1224 |
| 7 | $\mathbb{Z}$ | 0 | $\mathbb{Z}_{2}$ | 0 | 1 | 576 |
| 8 | $\mathbb{Z}$ | $\mathbb{Z}$ | 0 | $\mathbb{Z}$ | -1 | 576 |
