

Free Vacuum Energy from two Negative Charged Black Holes (string knots) in an electric adapted modern VAJRA

By Leo Vuyk.

Rotterdam Netherlands.

According to Quantum FFF Theory, the vacuum electric energy production is based on the new physics that all magnetic interference ball lightnings are carrying a negative charged outside horizon and an internal positive charged nucleus. At the same time, ball lightning produces a minimal amount of plasma charged basic gas atoms, by vacuum particle collision into positrons and electrons and baryons at the ball lightning horizon.

By producing and maintaining two interference ball lightnings separated, but next to each other inside a metal cage, called "Vajra" it is possible to create a continuous current flow for commercial use. The Vajra is internal equipped with electric isolated and electric transport lines to channel the electric charge to two contact knots to drain and electricity use of the system.

The interference ball lightnings are produced by the interference of multiple new physics magnetic monopole fields (North and South) with so called $B=0$ with minimal strength at the end created by so called bifilar electric solenoids, but able to produce complex Rigid String Knots or ball lightnings at both ends of the solenoid.

6 or 8 (bifilar solenoids) $B=0$ North+ South monopole Interference with 3 or 4 compound Rigid String particle knots (below) able to build the more complex Black Hole knot, with internal positive and external negative charge. According to Quantum FFF Theory.

Transfer systems through the vacuum lattice.

Two different tetrahedron space fill systems with left or right hand chirality, needed to make material or anti-material universes.

Space fill unit with RIGHT hand rotation. Space fill unit with LEFT hand rotation.

Path integral or Sum over Histories (Feynman) visual represented for the Axion-Higgs tetrahedral vacuum lattice, according to Quantum FFF Theory.
 There are two field trajectory systems; one for Photon information transfer (black Lines: B,C,D,E and F) and one for real transportation of Fermions, Bosons and Gluons (A).
 The Gluons are assumed to mutate after about 1 cm (see: Babcock and Bergman experiment) into a monopole Photon, which does not travel but oscillate as local vacuum particle, transferring photon information with the local speed of light.
 Fermions are propeller shaped and assumed to form a Calabi Yaw rotational surface.
 If the chirality of all the tetrahedron ribs has a total of 60 degrees rotation, then at vertex points, the information transfer has only two equal choices to reach the next tetrahedron rib, as is assumed for the Path integral solution.

The Magic of Fermion- Repelling and Creating Black Hole Horizon

! You need a dark energy oscillating particle Vacuum Lattice combined with a Dark Matter String Nucleus of a Black Hole AND Propeller shaped Rigid Spinning Fermions.

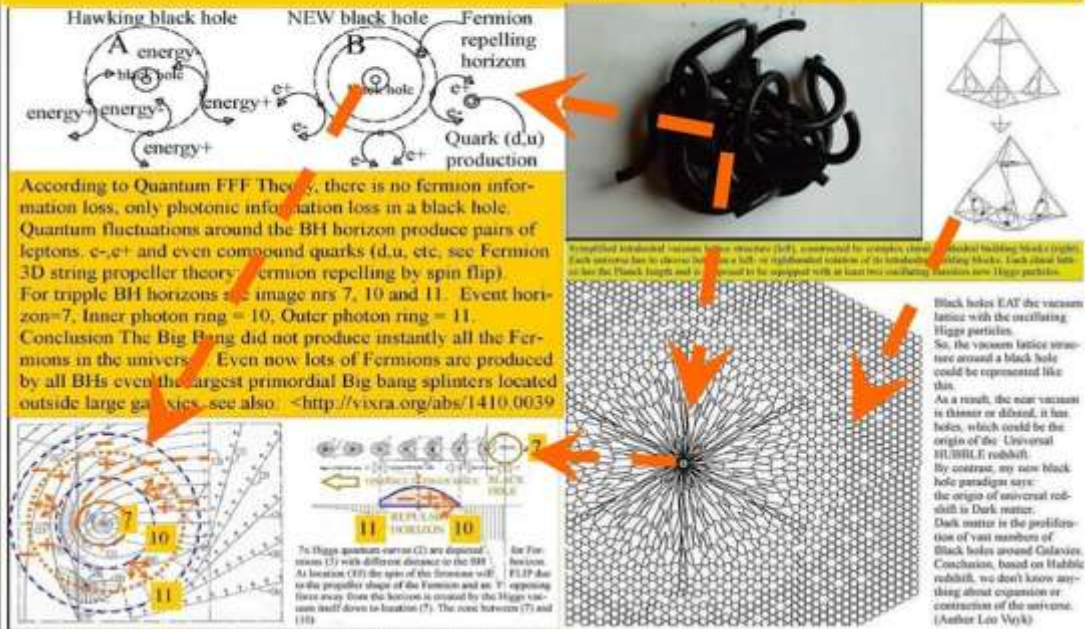

Figure 6, the new physics principle of black hole charging and vacuum diluting.

Fermion Propeller String Theory, as a solution for the Black Hole Information Paradox, according to Quantum FFF Theory.

The BH information paradox solution involves, that NO Fermions will ever surpass the postulated Fermion Repulsion Horizon. The Fermion propeller shape is assumed to be the origin that it will be polarizing its "propeller nose" into the direction of incoming Vacuum string particles. As a reaction it will be pushed outside the dual electric horizon into 2x charged Fermion layers, by the butterfly shaped vacuum vector space concentration. Both layers will form a Plasma disc which is accelerated into two opposing jets.

The mysterious source of cosmic rays is also reason to look at the southern hemisphere to observe the opposing second Stellar Anchor Black Hole (SABH) (Cosmic ray production by NEW black hole paradigm according to Quantum-FFF Theory).

According to Quantum FFF Theory, "New Black Holes produce Proton-Electron plasma. By the strong Casimir vacuum push gravity on the BH, the "Lighter" electrons will stay outside the "heavier" proton horizon (blue). As a consequence BHs have a strong electric potential, which is liberated by asymmetric processes in dual BH systems like Herbig Haro objects showing strong electro magnetic effects in open cluster star formation and Diracland Alfvén circuits around the earth and even in the so-called HERP-2 results.

Reverse Engineering of UFOs, by Lorentz force between Tesla dual pancake coils however, REACTION LESS by large diameter internal conductor wires equipped with reduced B field Anti Maxwell Dip area. (below)

According to Quantum FFF theory, all magnetic fields can be presented as DUAL Magnetic Monopole Photon Vector Arrays. These monopole arrays undergo curvature. As a result, the magnetic field intensity around the Earth and a wire is NOT dropping off with the square of the distance from the source!! The field become stronger polarized away from the source (See images). Close to the current transporting wire the magnetic field strength is zero due to the parallel trajectories of North and South Photons before curvature and polarisation of iron powder (Author: Leo Vuy!)
