ABSTRACT

In the general relativity theory, we find the electro-magnetic field transformation and the electro-magnetic field equation (Maxwell equation) in Rindler spacetime. We treat Lorentz gauge transformation in Rindler spacetime. We find the electro-magnetic wave equation and the electro-magnetic wave function in Rindler space-time. Specially, this article say the uniqueness of the accelerated frame because the accelerated frame can treat electro-magnetic field equation.

1. Introduction

In the general relativity theory, our article's aim is that we find the electro-magnetic field equation in Rindler space-time.

The Rindler coordinate is

$$ct = \left(\frac{c^2}{a_0} + \xi^1 \right) \sinh\left(\frac{a_0 \xi^0}{c} \right)$$

$$x = \left(\frac{c^2}{a_0} + \xi^1 \right) \cosh\left(\frac{a_0 \xi^0}{c} \right) - \frac{c^2}{a_0}, y = \xi^2, z = \xi^3 \quad (1)$$

In this time, the tetrad θ^a_μ is

$$d\tau^2 = dt^2 - \frac{1}{c^2} [dx^2 + dy^2 + dz^2]$$

$$= -\frac{1}{c^2} \eta_{ab} \frac{\partial x^a}{\partial \xi^\mu} \frac{\partial x^b}{\partial \xi^\nu} d\xi^\mu d\xi^\nu$$

$$= -\frac{1}{c^2} \eta_{ab} \theta^a_\mu \theta^b_\nu d\xi^\mu d\xi^\nu = -\frac{1}{c^2} g_{\mu\nu} d\xi^\mu d\xi^\nu, \quad \theta^a_\mu = \frac{\partial x^a}{\partial \xi^\mu} \quad (2)$$

$$\theta^a_0(\xi^0) = \frac{\partial x^a}{\partial \xi^0} = ((1 + \frac{a_0}{c^2} \xi^1) \cosh(\frac{a_0 \xi^0}{c}), (1 + \frac{a_0}{c^2} \xi^1) \sinh(\frac{a_0 \xi^0}{c}), 0, 0) \quad (3)$$

About y -axis's and z -axis's orientation

$$\theta^a_2(\xi^0) = \frac{\partial x^a}{\partial \xi^2} = (0, 0, 1, 0), \quad \theta^a_3(\xi^0) = \frac{\partial x^a}{\partial \xi^3} = (0, 0, 0, 1) \quad (4)$$

The other unit vector $\theta^a_1(\xi^0)$ is

$$\theta^a_1(\xi^0) = \frac{\partial x^a}{\partial \xi^1} = (\sinh(\frac{a_0 \xi^0}{c}), \cosh(\frac{a_0 \xi^0}{c}), 0, 0) \quad (5)$$

Therefore,

$$\begin{aligned} cdt &= c \cosh(\frac{a_0 \xi^0}{c}) d\xi^0 (1 + \frac{a_0}{c^2} \xi^1) + \sinh(\frac{a_0 \xi^0}{c}) d\xi^1 \\ &= c \cosh(\frac{a_0 \xi^0}{c}) d\xi^0 + \sinh(\frac{a_0 \xi^0}{c}) d\xi^1 \\ dx &= c \sinh(\frac{a_0 \xi^0}{c}) d\xi^0 (1 + \frac{a_0}{c^2} \xi^1) + \cosh(\frac{a_0 \xi^0}{c}) d\xi^1 \end{aligned}$$

$$= c \sinh\left(\frac{a_0 \xi^0}{c}\right) d\xi^0 + \cosh\left(\frac{a_0 \xi^0}{c}\right) d\xi^1, dy = d\xi^2 = d\xi^2, dz = d\xi^3 = d\xi^3 \quad (6)$$

The vector transformation is

$$V^\mu = \frac{\partial x^\mu}{\partial x^\alpha} V^\alpha, \quad U_\mu = \frac{\partial x^\alpha}{\partial x^\mu} U_\alpha \quad (7)$$

Therefore, the transformation of the electro-magnetic 4-vector potential $(\phi, \vec{A}) = A^\alpha$ is

$$A^\alpha = \frac{\partial x^\alpha}{\partial x^\mu} A^\mu = \frac{\partial x^\alpha}{\partial \xi^\mu} A_\xi^\mu = e^\alpha_\mu A_\xi^\mu, \quad e^\alpha_\mu = \frac{\partial x^\alpha}{\partial \xi^\mu}$$

$$dx^\alpha = \frac{\partial x^\alpha}{\partial x^\mu} dx^\mu = \frac{\partial x^\alpha}{\partial \xi^\mu} d\xi^\mu = e^\alpha_\mu d\xi^\mu, \quad e^\alpha_\mu = \frac{\partial x^\alpha}{\partial \xi^\mu} \quad (8)$$

Hence, the transformation of the electro-magnetic 4-vector potential (ϕ, \vec{A}) in inertial frame and the electro-magnetic 4-vector potential (ϕ_ξ, \vec{A}_ξ) in uniformly accelerated frame is

$$\begin{aligned} & \left(\frac{1}{c^2} \frac{\partial^2}{\partial t^2} - \nabla^2 \right) \phi = 4\pi\rho \\ & \left(\frac{1}{c^2} \frac{\partial^2}{\partial t^2} - \nabla^2 \right) \vec{A} = \frac{4\pi}{c} \vec{j} \\ & \text{4-vector } (c\rho, \vec{j}) = \rho_0 \frac{dx^\alpha}{d\tau} \\ & \phi = \cosh\left(\frac{a_0 \xi^0}{c}\right) \left(1 + \frac{a_0}{c^2} \xi^1\right) \phi_\xi + \sinh\left(\frac{a_0 \xi^0}{c}\right) A_\xi^1 \\ & = \cosh\left(\frac{a_0 \xi^0}{c}\right) \hat{\phi}_\xi + \sinh\left(\frac{a_0 \xi^0}{c}\right) \hat{A}_\xi^1 \\ & A_x = \sinh\left(\frac{a_0 \xi^0}{c}\right) \left(1 + \frac{a_0}{c^2} \xi^1\right) \phi_\xi + \cosh\left(\frac{a_0 \xi^0}{c}\right) A_\xi^1 \\ & = \sinh\left(\frac{a_0 \xi^0}{c}\right) \hat{\phi}_\xi + \cosh\left(\frac{a_0 \xi^0}{c}\right) \hat{A}_\xi^1 \\ & A_y = A_{\xi^2} = \hat{A}_{\xi^2}, A_z = A_{\xi^3} = \hat{A}_{\xi^3} \end{aligned} \quad (9)$$

$$g = \begin{pmatrix} -(1 + \frac{a_0 \xi^1}{c^2})^2 & 0 & 0 & 0 \\ 0 & 1 & 0 & 0 \\ 0 & 0 & 1 & 0 \\ 0 & 0 & 0 & 1 \end{pmatrix}, \eta = \begin{pmatrix} -1 & 0 & 0 & 0 \\ 0 & 1 & 0 & 0 \\ 0 & 0 & 1 & 0 \\ 0 & 0 & 0 & 1 \end{pmatrix}$$

$$e^a{}_\mu e_b{}^\mu = \delta^a{}_b, \quad e^a{}_\mu e_a{}^\nu = \delta_\mu{}^\nu$$

$$e^a{}_\mu e^b{}_\nu \eta_{ab} = g_{\mu\nu} \rightarrow A^T \eta A = g$$

$$e_a{}^\mu e_b{}^\nu g_{\mu\nu} = \eta_{ab} \rightarrow (A^T)^{-1} g A^{-1} = (A^T)^{-1} A^T \eta A A^{-1} = \eta$$

$$e^a{}_\mu = \eta^{ab} g_{\mu\nu} e_b{}^\nu \rightarrow \eta^{-1} (A^T)^{-1} A^T \eta A = A = \eta^{-1} (A^T)^{-1} g \quad (10)$$

2. Electro-magnetic Field in the Rindler space-time

The electro-magnetic field (\vec{E}, \vec{B}) is in the inertial frame,

$$\vec{E} = -\vec{\nabla}\phi - \frac{\partial \vec{A}}{\partial t}, \vec{B} = \vec{\nabla} \times \vec{A} \quad (15)$$

& = \cosh(\frac{a_0}{c} \xi^0) [\frac{\partial A_{\xi^2}}{\partial \xi^1} - \frac{\partial A_{\xi^1}}{\partial \xi^2}] \\
& + \sinh(\frac{a_0}{c} \xi^0) [-\frac{1}{(1 + \frac{a_0}{c^2} \xi^1)} \frac{\partial}{\partial \xi^2} [\phi_\xi (1 + \frac{a_0 \xi^1}{c^2})^2] - \frac{1}{(1 + \frac{a_0 \xi^1}{c^2})} \frac{\partial A_{\xi^2}}{c \partial \xi^0}] \\

Hence, we can define the electro-magnetic field $(\vec{E}_\xi, \vec{B}_\xi)$ in Rindler spacetime.

$$\begin{aligned}
\vec{E}_\xi &= -\frac{1}{(1 + \frac{a_0 \xi^1}{c^2})} \vec{\nabla}_\xi \{\phi_\xi (1 + \frac{a_0 \xi^1}{c^2})^2\} - \frac{1}{(1 + \frac{a_0 \xi^1}{c^2})} \frac{\partial \vec{A}_\xi}{c \partial \xi^0} \\
&= -\frac{1}{(1 + \frac{a_0 \xi^1}{c^2})} \vec{\nabla}_{\hat{\xi}} \{\hat{\phi}_\xi (1 + \frac{a_0 \xi^1}{c^2})\} - \frac{\partial \vec{\hat{A}}_\xi}{c \partial \hat{\xi}^0} \\
\vec{B}_\xi &= \vec{\nabla}_\xi \times \vec{A}_\xi = \vec{\nabla}_{\hat{\xi}} \times \vec{\hat{A}}_\xi \\
\text{In this time, } \vec{\nabla}_\xi &= (\frac{\partial}{\partial \xi^1}, \frac{\partial}{\partial \xi^2}, \frac{\partial}{\partial \xi^3}), \vec{A}_\xi = (A_{\xi^1}, A_{\xi^2}, A_{\xi^3}) \\
\vec{\nabla}_{\hat{\xi}} &= (\frac{\partial}{\partial \hat{\xi}^1}, \frac{\partial}{\partial \hat{\xi}^2}, \frac{\partial}{\partial \hat{\xi}^3}), \vec{\hat{A}}_\xi = (\hat{A}_{\xi^1}, \hat{A}_{\xi^2}, \hat{A}_{\xi^3}) \quad (22)
\end{aligned}$$

Lorentz gauge transformation is in Rindler spacetime,

$$\phi_\xi \rightarrow \phi_\xi - \frac{1}{c} \frac{\partial \Lambda}{\partial \xi^0} \frac{1}{(1 + \frac{a_0 \xi^1}{c^2})^2}, \vec{A}_\xi \rightarrow \vec{A}_\xi + \vec{\nabla}_\xi \Lambda, \Lambda \text{ is a scalar function.} \quad (23)$$

\vec{B}_\xi &= \vec{\nabla}_\xi \times \vec{A}_\xi + \vec{\nabla}_\xi \times \vec{\nabla}_\xi \Lambda = \vec{\nabla}_\xi \times \vec{A}_\xi
\end{aligned} \tag{24}$$

Lorentz gauge fix condition is in Rindler spacetime,

$$\begin{aligned}

A_y + \frac{\partial \Lambda}{\partial y} &= A_{\xi^2} + \frac{\partial \Lambda}{\partial \xi^2}, A_z + \frac{\partial \Lambda}{\partial z} = A_{\xi^3} + \frac{\partial \Lambda}{\partial \xi^3}
\end{aligned}$$

$$0 = \frac{1}{c} \frac{\partial}{\partial t} \left(-\frac{1}{c} \frac{\partial \Lambda}{\partial t} \right) + \vec{\nabla} \cdot (\vec{\nabla} \Lambda) = -\left[\frac{1}{c^2} \frac{1}{\left(1 + \frac{a_0 \xi^1}{c^2}\right)^2} \left(\frac{\partial}{\partial \xi^0} \right)^2 - \nabla_{\xi}^2 \right] \Lambda \quad (25)$$

We obtain the transformation of the electro-magnetic field.

$$\begin{aligned} E_x &= -\frac{1}{\left(1 + \frac{a_0 \xi^1}{c^2}\right)} \frac{\partial}{\partial \xi^1} \left\{ \phi_{\xi} \left(1 + \frac{a_0 \xi^1}{c^2}\right)^2 \right\} - \frac{1}{\left(1 + \frac{a_0 \xi^1}{c^2}\right)} \frac{\partial A_{\xi^1}}{\partial \xi^0} \\ &= -\frac{1}{\left(1 + \frac{a_0 \xi^1}{c^2}\right)} \frac{\partial}{\partial \xi^1} \left\{ \hat{\phi}_{\xi} \left(1 + \frac{a_0 \xi^1}{c^2}\right) \right\} - \frac{\partial \hat{A}_{\xi^1}}{\partial \xi^0} = E_{\xi^1}, \\ E_y &= E_{\xi^2} \cosh\left(\frac{a_0 \xi^0}{c}\right) + B_{\xi^3} \sinh\left(\frac{a_0 \xi^0}{c}\right), \\ E_z &= E_{\xi^3} \cosh\left(\frac{a_0 \xi^0}{c}\right) - B_{\xi^2} \sinh\left(\frac{a_0 \xi^0}{c}\right) \\ B_x &= B_{\xi^1}, \\ B_y &= B_{\xi^2} \cosh\left(\frac{a_0 \xi^0}{c}\right) - E_{\xi^3} \sinh\left(\frac{a_0 \xi^0}{c}\right) \\ B_z &= B_{\xi^3} \cosh\left(\frac{a_0 \xi^0}{c}\right) + E_{\xi^2} \sinh\left(\frac{a_0 \xi^0}{c}\right) \end{aligned} \quad (26)$$

Hence,

$$E_x = E_{\xi^1}, B_x = B_{\xi^1},$$

$$\begin{pmatrix} E_y \\ B_y \\ E_z \\ B_z \end{pmatrix} = H \begin{pmatrix} E_{\xi^2} \\ B_{\xi^2} \\ E_{\xi^3} \\ B_{\xi^3} \end{pmatrix}$$

$$H = \begin{pmatrix} \cosh\left(\frac{a_0 \xi^0}{c}\right) & 0 & 0 & \sinh\left(\frac{a_0 \xi^0}{c}\right) \\ 0 & \cosh\left(\frac{a_0 \xi^0}{c}\right) & -\sinh\left(\frac{a_0 \xi^0}{c}\right) & 0 \\ 0 & -\sinh\left(\frac{a_0 \xi^0}{c}\right) & \cosh\left(\frac{a_0 \xi^0}{c}\right) & 0 \\ \sinh\left(\frac{a_0 \xi^0}{c}\right) & 0 & 0 & \cosh\left(\frac{a_0 \xi^0}{c}\right) \end{pmatrix} \quad (27)$$

The inverse-transformation of the electro-magnetic field is

$$E_{\xi^1} = E_x, B_{\xi^1} = B_x$$

$$\begin{pmatrix} E_{\xi^2} \\ B_{\xi^2} \\ E_{\xi^3} \\ B_{\xi^3} \end{pmatrix} = H^{-1} \begin{pmatrix} E_y \\ B_y \\ E_z \\ B_z \end{pmatrix}$$

$$H^{-1} = \begin{pmatrix} \cosh\left(\frac{a_0 \xi^0}{c}\right) & 0 & 0 & -\sinh\left(\frac{a_0 \xi^0}{c}\right) \\ 0 & \cosh\left(\frac{a_0 \xi^0}{c}\right) & \sinh\left(\frac{a_0 \xi^0}{c}\right) & 0 \\ 0 & \sinh\left(\frac{a_0 \xi^0}{c}\right) & \cosh\left(\frac{a_0 \xi^0}{c}\right) & 0 \\ -\sinh\left(\frac{a_0 \xi^0}{c}\right) & 0 & 0 & \cosh\left(\frac{a_0 \xi^0}{c}\right) \end{pmatrix} \quad (28)$$

$$E_{\xi^1} = E_x, B_{\xi^1} = B_x$$

$$E_{\xi^2} = E_y \cosh\left(\frac{a_0 \xi^0}{c}\right) - B_z \sinh\left(\frac{a_0 \xi^0}{c}\right),$$

$$B_{\xi^2} = B_y \cosh\left(\frac{a_0 \xi^0}{c}\right) + E_z \sinh\left(\frac{a_0 \xi^0}{c}\right)$$

$$E_{\xi^3} = E_z \cosh\left(\frac{a_0 \xi^0}{c}\right) + B_y \sinh\left(\frac{a_0 \xi^0}{c}\right)$$

$$B_{\xi^3} = B_z \cosh\left(\frac{a_0 \xi^0}{c}\right) - E_y \sinh\left(\frac{a_0 \xi^0}{c}\right) \quad (29)$$

Hence, Eq (39-iii), Eq (39-iv) are invariant about Lorentz gauge transformation in Rindler spacetime.

Hence, the electro-magnetic field equations(Maxwell Equations) in Rindler spacetime are invariant about Lorentz gauge transformation.

4. Electro-magnetic wave equation in Rindler space-time

The electro-magnetic wave function is

$$E_x = E_{x0} \sin \Phi, E_y = E_{y0} \sin \Phi, E_z = E_{z0} \sin \Phi$$

$$B_x = B_{x0} \sin \Phi, B_y = B_{y0} \sin \Phi, B_z = B_{z0} \sin \Phi$$

$$E_{\xi^1} = E_x, B_{\xi^1} = B_x$$

$$E_{\xi^1} = E_{x0} \sin \Phi, B_{\xi^1} = B_{x0} \sin \Phi$$

$$\begin{aligned}
E_{\xi^2} &= E_y \cosh\left(\frac{a_0 \xi^0}{c}\right) - B_z \sinh\left(\frac{a_0 \xi^0}{c}\right), \\
&= (E_{y0} \sin \Phi') \cosh\left(\frac{a_0 \xi^0}{c}\right) - (B_{z0} \sin \Phi') \sinh\left(\frac{a_0 \xi^0}{c}\right) \\
B_{\xi^2} &= B_y \cosh\left(\frac{a_0 \xi^0}{c}\right) + E_z \sinh\left(\frac{a_0 \xi^0}{c}\right) \\
&= (B_{y0} \sin \Phi') \cosh\left(\frac{a_0 \xi^0}{c}\right) + (E_{z0} \sin \Phi') \sinh\left(\frac{a_0 \xi^0}{c}\right) \\
E_{\xi^3} &= E_z \cosh\left(\frac{a_0 \xi^0}{c}\right) + B_y \sinh\left(\frac{a_0 \xi^0}{c}\right) \\
&= (E_{z0} \sin \Phi') \cosh\left(\frac{a_0 \xi^0}{c}\right) + (B_{y0} \sin \Phi') \sinh\left(\frac{a_0 \xi^0}{c}\right) \\
B_{\xi^3} &= B_z \cosh\left(\frac{a_0 \xi^0}{c}\right) - E_y \sinh\left(\frac{a_0 \xi^0}{c}\right) \\
&= (B_{z0} \sin \Phi') \cosh\left(\frac{a_0 \xi^0}{c}\right) - (E_{y0} \sin \Phi') \sinh\left(\frac{a_0 \xi^0}{c}\right)
\end{aligned} \tag{53}$$

$\Phi = \omega(t - l \frac{x}{c} - m \frac{y}{c} - n \frac{z}{c}),$
 $\Phi' = \omega'(\hat{\xi}^0 - l' \frac{\hat{\xi}^1}{c} - m' \frac{\hat{\xi}^2}{c} - n' \frac{\hat{\xi}^3}{c})$

In this time,

$$ct = \left(\frac{c^2}{a_0} + \xi^1 \right) \sinh\left(\frac{a_0 \xi^0}{c}\right), \quad x = \left(\frac{c^2}{a_0} + \xi^1 \right) \cosh\left(\frac{a_0 \xi^0}{c}\right) - \frac{c^2}{a_0}$$

$$y = \xi^2, z = \xi^3$$

$$\xi^0 = \frac{c}{a_0} \tanh^{-1}\left(\frac{ct}{\sqrt{x + \frac{c^2}{a_0}}}\right), \quad \xi^1 = \sqrt{\left(x + \frac{c^2}{a_0}\right)^2 - c^2 t^2} - \frac{c^2}{a_0}$$

$$\lim_{a_0 \rightarrow 0} \xi^0 = \lim_{a_0 \rightarrow 0} c \tanh^{-1}\left(\frac{cta_0}{a_0 x + c^2}\right) / a_0 = \lim_{a_0 \rightarrow 0} c \tanh^{-1}\left(\frac{cta_0}{c^2}\right) / a_0 = \lim_{a_0 \rightarrow 0} c \frac{1}{1 - (\frac{a_0 t}{c})^2} \frac{t}{c} = t$$

$$\lim_{a_0 \rightarrow 0} \xi^1 = \lim_{a_0 \rightarrow 0} c^2 \left(\sqrt{\left(1 + \frac{a_0}{c^2} x\right)^2 - \frac{a_0^2 t^2}{c^2}} - 1 \right) / a_0 = \lim_{a_0 \rightarrow 0} c^2 \left(\sqrt{\left(1 + \frac{a_0}{c^2} x\right)^2} - 1 \right) / a_0$$

$$= \lim_{a_0 \rightarrow 0} c^2 \left(\frac{a_0}{c^2} x \right) / a_0 = x$$

Hence,

$$\lim_{a_0 \rightarrow 0} \hat{\xi}^0 = \lim_{a_0 \rightarrow 0} \int d\hat{\xi}^0 = \lim_{a_0 \rightarrow 0} \int \left(1 + \frac{a_0}{c^2} \xi^1 \right) d\xi^0 = \lim_{a_0 \rightarrow 0} \int d\xi^0 = \lim_{a_0 \rightarrow 0} \xi^0 = t$$

$$\lim_{a_0 \rightarrow 0} \hat{\xi}^1 = \lim_{a_0 \rightarrow 0} \xi^1 = x, \quad y = \xi^2 = \hat{\xi}^2, \quad z = \xi^3 = \hat{\xi}^3$$

Therefore, electro-magnetic wave function is

$$\begin{aligned} \lim_{a_0 \rightarrow 0} \Phi' &= \lim_{a_0 \rightarrow 0} \omega' \left(\hat{\xi}^0 - l' \frac{\hat{\xi}^1}{c} - m' \frac{\hat{\xi}^2}{c} - n' \frac{\hat{\xi}^3}{c} \right) = \omega' \left(t - l' \frac{x}{c} - m' \frac{y}{c} - n' \frac{z}{c} \right) \\ &= \omega \left(t - l \frac{x}{c} - m \frac{y}{c} - n \frac{z}{c} \right) = \Phi \\ \omega &= \omega', \quad l' = l, \quad m' = m, \quad n' = n \\ l'^2 + m'^2 + n'^2 &= 1 \quad , \quad l'^2 + m'^2 + n'^2 = 1 \end{aligned} \tag{54}$$

Hence,

$$\begin{aligned} &\left[\frac{1}{c^2} \frac{1}{(1 + \frac{a_0}{c^2} \xi^1)^2} \left(\frac{\partial}{\partial \xi^0} \right)^2 - \nabla_{\xi}^2 \right] E_{\xi^1} \\ &= \left[\frac{1}{c^2} \left(\frac{\partial}{\partial \hat{\xi}^0} \right)^2 - \nabla_{\hat{\xi}}^2 \right] E_{\xi^1} = 0 \\ &\left[\frac{1}{c^2} \frac{1}{(1 + \frac{a_0}{c^2} \xi^1)^2} \left(\frac{\partial}{\partial \xi^0} \right)^2 - \nabla_{\xi}^2 \right] B_{\xi^1} \\ &= \left[\frac{1}{c^2} \left(\frac{\partial}{\partial \hat{\xi}^0} \right)^2 - \nabla_{\hat{\xi}}^2 \right] B_{\xi^1} = 0 \\ &\left[\frac{1}{c^2} \frac{1}{(1 + \frac{a_0}{c^2} \xi^1)^2} \left(\frac{\partial}{\partial \xi^0} \right)^2 - \nabla_{\xi}^2 \right] E_y \\ &= \left[\frac{1}{c^2} \left(\frac{\partial}{\partial \hat{\xi}^0} \right)^2 - \nabla_{\hat{\xi}}^2 \right] E_y = 0 \\ &\left[\frac{1}{c^2} \frac{1}{(1 + \frac{a_0}{c^2} \xi^1)^2} \left(\frac{\partial}{\partial \xi^0} \right)^2 - \nabla_{\xi}^2 \right] B_y \\ &= \left[\frac{1}{c^2} \left(\frac{\partial}{\partial \hat{\xi}^0} \right)^2 - \nabla_{\hat{\xi}}^2 \right] B_y = 0 \end{aligned}$$

$$\begin{aligned}
& \left[\frac{1}{c^2} \frac{1}{(1 + \frac{a_0}{c^2} \xi^1)^2} \left(\frac{\partial}{\partial \xi^0} \right)^2 - \nabla_{\xi}^2 \right] E_z \\
&= \left[\frac{1}{c^2} \left(\frac{\partial}{\partial \xi^0} \right)^2 - \nabla_{\xi}^2 \right] E_z = 0 \\
& \left[\frac{1}{c^2} \frac{1}{(1 + \frac{a_0}{c^2} \xi^1)^2} \left(\frac{\partial}{\partial \xi^0} \right)^2 - \nabla_{\xi}^2 \right] B_z \\
&= \left[\frac{1}{c^2} \left(\frac{\partial}{\partial \xi^0} \right)^2 - \nabla_{\xi}^2 \right] B_z = 0
\end{aligned} \tag{55}$$

The electro-magnetic wave equation is in vacuum

$$\text{In this time, } \vec{\nabla}_{\xi} (1 + \frac{a_0}{c^2} \xi^1) = \left(\frac{a_0}{c^2}, 0, 0 \right) \tag{56}$$

Hence,

The electromagnetic wave function, Eq(53),Eq(54) satisfy the electromagnetic wave equation,

5. Conclusion

We find the electro-magnetic field transformation and the electro-magnetic equation in uniformly accelerated frame.

Generally, the coordinate transformation of accelerated frame is

$$(I) \quad ct = \left(\frac{C^2}{a_0} + \xi^1 \right) \sinh\left(\frac{a_0 \xi^0}{C} \right)$$

$$x = \left(\frac{C^2}{a_0} + \xi^1 \right) \cosh\left(\frac{a_0 \xi^0}{C} \right) - \frac{C^2}{a_0} \quad , y = \xi^2, z = \xi^3 \quad (59)$$

$$(II) \quad ct = \frac{C^2}{a_0} \exp\left(\frac{a_0}{C^2} \xi^1 \right) \sinh\left(\frac{a_0 \xi^0}{C} \right)$$

$$x = \frac{C^2}{a_0} \exp\left(\frac{a_0}{C^2} \xi^1 \right) \cosh\left(\frac{a_0 \xi^0}{C} \right) - \frac{C^2}{a_0}, y = \xi^2, z = \xi^3 \quad (60)$$

Hence, this article say the accelerated frame is Rindler coordinate (I) that can treat electro-magnetic field equation.
